VOIS
Virtual Open Innovation
Environment for SMEs

The project

VOIS Erasmus+ KA2, VET, is a European funded project for building professional open innovation competences among the agri-food and bio-economy sector.

What has happened so far

The last two months, April & May 2024, have been devoted to the external piloting of the project's deliverables.

More specifically, each partner implemented piloting sessions with members of the project's target groups in order to test the quality, ease-of-use, accessibility, attractiveness and all other aspects of the Virtual Open Innovation Environment that has been created.

In general, the participants/testers were really eager to share their opinions, comments, and feedback on the project's Digital Platform and curriculum and all were pleased with the deliverables' quality; they thought the content is highly educating, well-written, simple to understand, and practical for usage in different contexts.

Some of the most characteristic comments we received are shown below:

- ***Interesting work. The content is clear, the writing simple and examples are often used.***
- ***It is really important that the project includes and shares information about different EU countries. I found area 3 very interesting.***
- ***The digital platform is clear and easy to use, which is important for people who are interested in the topic but may not have good technological training.***
- ***Helpful content about Open Innovation***
- ***I liked the holistic view on selection and management***
- ***Broadened my horizon on team dynamics***
- ***Very elaborate on managing collaborative innovation***

Our final meeting in Zadar, Croatia

On the 4th of June 2024, the partnership met in person for the last time in the beautiful city of Zadar, Croatia.

The final details of the project's closing were discussed, and any pending matters were finalised. Now, each partner will organise their multiplier events for the dissemination of the project's deliverables and for achieving further impact on the target groups included in this work.
